User story - MSUS001:

As a customer or guest or officer, I want to search a movie by its title so that I can quickly find the movie I want to watch.

Acceptance Criteria

1. The system should prompt the user to enter the movie title to search.
2. The user should be able to enter a movie title through the console.
3. The system should search the movie list based on the entered title.
4. If a matching movie is found, the system should display the movie title and available details.
5. If no movie matches the entered title, the system should display a message such as "Movie not found".
6. The movie search functionality should be accessible to customer, guest, and officer.
7. If multiple movies match the entered title, the system should display all matching movies.

User story -MSUS002:

As a customer or guest or officer, I want to search movies by language so that I can watch movies in my preferred language.

Acceptance Criteria

1. The system should prompt the user to enter a language to search for movies.
2. The system should search the movie list based on the entered language.
3. If movies are available in the entered language, the system should display the list of matching movies.
4. If multiple movies are available in the selected language, the system should display all matching movies.
5. If no movies are available in the entered language, the system should display a message such as "No movies found for the selected language."
6. The movie search by language feature should be accessible to customer, guest, and officer.

User story - MSUS003:

As a customer or guest or officer, I want to search movies by genre so that I can browse movies based on my interests.

Acceptance Criteria

1. The system should prompt the user to enter a genre to search for movies.
2. The system should search the movie list based on the entered genre.
3. If movies are available in the selected genre, the system should display the list of matching movies.

4. If multiple movies belong to the selected genre, the system should display all matching movies.
5. If no movies are available for the entered genre, the system should display a message such as "No movies found for the selected genre."
6. The movie search by genre feature should be accessible to customer, guest, and officer.

User story - MSUS004:

As a customer or guest or officer, I want to search movies by theatre so that I can find movies playing in a specific theatre

Acceptance Criteria

1. The system should prompt the user to enter the theatre name.
2. The system should search the available movies based on the entered theatre.
3. If movies are available in the selected theatre, the system should display the list of movies.
4. If multiple movies are playing in the theatre, the system should display all the movies.
5. If no movies are available in the entered theatre, the system should display a message such as "No movies available for the selected theatre."
6. Customer, guest, and officer should be able to search movies by theatre.

User story - MSUS005:

As a customer or guest, I want to search movies by city so that I can see movies available in my location

Acceptance Criteria

1. The system should prompt the user to enter a city name.
2. The system should search the available movies based on the entered city.
3. If movies are available in the entered city, the system should display the list of movies.
4. If multiple movies are available in the selected city, the system should display all the movies.
5. If no movies are available in the entered city, the system should display a message such as "No movies available in the selected city."
6. Only customer and guest should be able to search movies by city.

User story - SUS001:

As a customer, I want to select a city so that I can see the theatres available in my location.

Acceptance Criteria

1. The system should display a list of available cities to the customer.
2. The customer should be able to select a city from the displayed list.
3. The system should retrieve theatres available in the selected city.
4. The system should display the list of theatres available in the selected city.
5. If no theatres are available in the selected city, the system should display a message such as "No theatres available in the selected city."
6. Only the customer should be able to select a city to view available theatres.

User story - SUS002:

As a customer, I want to select a theatre in the chosen city so that I can see which movies are playing there.

Acceptance Criteria

1. The system should display the list of theatres available in the selected city.
2. The customer should be able to select a theatre from the displayed list.
3. The system should retrieve movies available in the selected theatre.
4. The system should display the list of movies playing in the selected theatre.
5. If multiple movies are playing in the theatre, the system should display all available
6. If no movies are available in the selected theatre, the system should display a message such as "No movies available in the selected theatre."

User story - SUS003:

As a customer or officer, I want to select a movie in the chosen theatre so that I can view available showtimes.

Acceptance Criteria

1. The system should display the list of movies playing in the selected theatre.
2. The user should be able to select a movie from the displayed list.
3. The system should retrieve showtimes available for the selected movie.
4. The system should display all available showtimes for the selected movie.
5. If multiple showtimes are available, the system should display all the showtimes.
6. If no showtimes are available for the selected movie, the system should display a message such as "No showtimes available for the selected movie."
7. Both customer and officer should be able to select a movie and view showtimes.

User story - SUS004:

As a customer or officer, I want to select a showtime for the movie so that I can proceed to booking tickets.

Acceptance Criteria

1. The system should display the list of available showtimes for the selected movie.
2. The user should be able to select a showtime from the displayed list.
3. The system should validate the selected showtime.
4. After selecting a valid showtime, the system should allow the user to proceed to the ticket booking process.
5. If the user selects an invalid showtime, the system should display an error message such as "Invalid showtime selection."
6. Both customer and officer should be able to select a showtime.

User story - RMUS001:

As an administrator, I want to view the movie details report so that I can monitor the movies available in the system.

Acceptance Criteria

1. The system should allow the administrator to access the movie details report.
2. The system should retrieve all movie details stored in the system.
3. The system should display movie information such as movie title, language, genre, theatre, and showtimes.
4. If multiple movies exist in the system, the report should display all movie records.
5. If no movies exist in the system, the system should display a message such as "No movies available in the system."
6. Only the administrator should be able to view the movie details report.

User story - RMUS002:

As an administrator, I want to view the booking report so that I can review ticket booking information.

Acceptance Criteria

1. The system should allow the administrator to access the booking report.
2. The system should retrieve all ticket booking records stored in the system.
3. The system should display booking information such as customer name, movie title, theatre, showtime, number of tickets, and booking date.
4. If multiple bookings exist, the system should display all booking records.

5. If no bookings exist in the system, the system should display a message such as "No booking records available."
6. Only the administrator should be able to view the booking report.

User story - RMUS003:

As an administrator, I want to view customer details reports so that I can monitor customer information in the system.

Acceptance Criteria

1. The system should allow the administrator to access the customer details report.
2. The system should retrieve all customer records stored in the system.
3. The system should display customer information such as customer name, email, and contact details.
4. If multiple customers exist in the system, the system should display all customer records.
5. If no customers exist in the system, the system should display a message such as "No customer records available."
6. Only the administrator should be able to view the customer details report.

User story - RMUS004:

As an administrator, I want to view daily booking reports, so that I can track booking activity for a specific date.

Acceptance Criteria

1. The system should prompt the administrator to enter a specific date to view the booking report.
2. The system should retrieve booking records for the entered date.
3. The system should display booking information such as customer name, movie title, theatre, showtime, number of tickets, and booking date.
4. If multiple bookings exist for the selected date, the system should display all booking records.
5. If no bookings exist for the entered date, the system should display a message such as "No bookings found for the selected date."
6. Only the administrator should be able to view the daily booking report.

User story - RMUS005:

As an administrator, I want to view cancelled ticket reports so that I can monitor ticket cancellations.

Acceptance Criteria

1. The system should allow the administrator to access the cancelled ticket report.

2. The system should retrieve all cancelled ticket records stored in the system.
3. The system should display information such as customer name, movie title, theatre, showtime, number of cancelled tickets, and cancellation date.
4. If multiple cancelled tickets exist, the system should display all cancellation records.
5. If no cancelled tickets exist in the system, the system should display a message such as "No cancelled ticket records available."
6. Only the administrator should be able to view the cancelled ticket report.
