User Management

User story – UMUS001

As an administrator, I want to create officer accounts so that theatre staff can manage bookings at the counter.

Acceptance Criteria – ACUM001

- The system should allow the administrator to select the **create officer account option** from the console menu.
- The system should prompt the administrator to **enter officer details such as name, username, and password**.
- The system should validate that all required fields are entered.
- The system should create the officer account after successful validation.
- The system should display a **confirmation message after the officer account is created**.

User story – UMUS002

As an administrator, I want to view user accounts so that I can manage system users.

Acceptance Criteria – ACUM002

- The system should allow the administrator to select the **view user accounts option**.
- The system should display the **list of registered users in the console**.
- The system should show **basic user details such as username and role**.
- The system should allow the administrator to review the user information.

User story – UMUS003

As a customer or administrator, I want to view my profile so that I can see my personal information stored in the system.

Acceptance Criteria – ACUM003

- The system should allow the user to select the **view profile option** from the menu.
- The system should retrieve the **stored user information**.
- The system should display **profile details such as username, email, and role** in the console.

User story – UMUS004

As a customer or administrator, I want to update my profile so that my personal information remains accurate.

Acceptance Criteria – ACUM004

- The system should allow the user to select the **update profile option**.
- The system should allow the user to **enter updated personal information**.
- The system should validate the updated details before saving.

- The system should update the profile information in the system.
- The system should display a **success message after the profile is updated**.

User story – UMUS005

As a system, I want to validate registration details so that only correct and complete customer information is saved.

Acceptance Criteria – ACUM005

- The system should check that **all required registration fields are entered**.
- The system should validate the **email format** during registration.
- The system should verify that the **username is not already used**.
- The system should allow registration only when the entered details are valid.

User story – UMUS006

As an administrator, I want to deactivate user accounts so that inactive or problematic users cannot access the system.

Acceptance Criteria – ACUM006

- The system should allow the administrator to **select a user account from the user list**.
- The system should provide an option to **deactivate the selected user account**.
- The system should update the **user account status to inactive**.
- The system should prevent the deactivated user from **logging into the system**.

User story – UMUS007

As a system, I want to terminate the user session after logout so that unauthorized access is prevented**.**

Acceptance Criteria – ACUM007

- The system should allow the user to select the **logout option** from the menu.
- The system should **end the current user session** after logout.
- The system should redirect the user to the **main login menu**.
- The system should prevent access to user features after logout.

User story – UMUS008

As an administrator, I want to update officer account details so that officer information remains accurate.

Acceptance Criteria – ACUM008

- The system should allow the administrator to **select an officer account to update**.
- The system should allow the administrator to **modify officer details such as name or password**.
- The system should validate the updated information before saving.
- The system should update the officer account details successfully.
- The system should display a **confirmation message after the update**.

Movie Management

User story – MMUS001

As an administrator, I want to add a new movie to the system so that it can be scheduled for shows in theatres.

Acceptance Criteria – ACMM001

- The system should allow the administrator to select the **add movie option** from the console menu.
- The system should prompt the administrator to **enter movie details**.
- The system should validate that all required movie details are entered.
- The system should store the movie information after successful validation.
- The system should display a **confirmation message after the movie is added**.

User story – MMUS002

As an administrator, I want to upload movie details such as title, genre, language, and duration so that customers can see accurate movie information.

Acceptance Criteria – ACMM002

- The system should allow the administrator to **enter movie details such as title, genre, language, and duration**.
- The system should validate that the entered details are not empty.
- The system should store the movie details in the system.
- The system should allow users to **view the stored movie information**.

User story – MMUS003

As an administrator, I want to update movie details so that the system always contains accurate information.

Acceptance Criteria – ACMM003

- The system should allow the administrator to **select a movie from the movie list**.
- The system should allow the administrator to **modify movie details**.
- The system should validate the updated information before saving.
- The system should update the movie details successfully.
- The system should display a **confirmation message after the update**.

User story – MMUS004

As a system, I want to validate updated movie details so that incorrect or incomplete information is not stored.

Acceptance Criteria – ACMM004

- The system should check that **all required fields are filled during movie update**.
- The system should verify that the **movie duration and title are valid values**.
- The system should prevent saving if **any required movie detail is missing**.
- The system should allow the update only when the **entered details are valid**.

User story – MMUS005

As an administrator, I want to delete a movie from the system so that outdated or unavailable movies are removed.

Acceptance Criteria – ACMM005

- The system should allow the administrator to **select a movie to delete**.
- The system should ask the administrator to **confirm the delete action**.
- The system should remove the selected movie from the system after confirmation.
- The system should update the **movie list after deletion**.

User story – MMUS006

As an administrator, I want to receive confirmation after deleting a movie so that I know the action was successful.

Acceptance Criteria – ACMM006

- The system should display a **confirmation message after the movie is deleted**.
- The system should confirm that the **movie has been removed from the system records**.
- The system should display the **updated movie list**.

User story – MMUS007

As a customer or officer or guest, I want to view the list of movies in the system so that I can see available movies.

Acceptance Criteria – ACMM007

- The system should allow users to **select the view movies option** from the console menu.
- The system should display the **list of available movies** in the console.
- The system should show **basic details such as movie title, genre, and language**.
- The system should allow users to **select a movie to view more details**.

User story – MMUS008

As an administrator, I want to view detailed information about a selected movie so that I can verify its details.

Acceptance Criteria – ACMM008

- The system should allow the administrator to **select a movie from the movie list**.
- The system should retrieve the **complete movie information from the system**.
- The system should display **detailed movie information such as title, genre, language, and duration** in the console.
