BDD Document – User Management & Movie Management

User Management Module

Feature: User Management Module

Scenario: Administrator creates officer account

User Story: UMUS001 – As an administrator, I want to create officer accounts so that theatre staff can manage bookings at the counter.

System Behaviour:

Given the administrator is logged into the system

When the administrator selects the create officer account option

And enters officer details such as name, username, email, **And** password

Then the system should create a new officer account

And store the officer information in the system

Scenario: Administrator views user accounts

User Story: UMUS002 – As an administrator, I want to view user accounts so that I can manage system users.

System Behaviour:

Given the administrator is logged into the system

When the administrator selects the view users option

Then the system should display the list of registered users

And show user details such as username, role, **And** account status

Scenario: User views profile information

User Story: UMUS003 – As a customer or administrator, I want to view my profile so that I can see my personal information stored in the system.

System Behaviour:

Given the user is logged into the system

When the user selects the view profile option

Then the system should retrieve the user profile information

And display the stored personal details

Scenario: User updates profile information

User Story: UMUS004 – As a customer or administrator, I want to update my profile so that my personal information remains accurate.

System Behaviour:

Given the user is logged into the system

When the user selects the update profile option

And modifies personal information such as name, email, or password

Then the system should validate the updated details

And save the updated profile information

Scenario: Validate customer registration details

User Story: UMUS005 – As a system, I want to validate registration details so that only correct **And** complete customer information is saved.

System Behaviour:

Given the user enters registration details

When the system validates the entered information

Then the system should check for missing or incorrect fields

And allow account creation only **When** the details are valid

Scenario: Administrator deactivates user account

User Story: UMUS006 – As an administrator, I want to deactivate user accounts so that inactive or problematic users cannot access the system.

System Behaviour:

Given the administrator is logged into the system

When the administrator selects a user account

And chooses the deactivate account option

Then the system should mark the account as inactive

And prevent the user from accessing the system

Scenario: Terminate session after logout

User Story: UMUS007 – As a system, I want to terminate the user session after logout so that unauthorized access is prevented.

System Behaviour:

Given the user is logged into the system

When the user selects the logout option

Then the system should terminate the active session

And redirect the user to the login page

Scenario: Administrator updates officer account details

User Story: UMUS008 – As an administrator, I want to update officer account details so that officer information remains accurate.

System Behaviour:

Given the administrator is logged into the system

When the administrator selects an officer account

And updates the officer details

Then the system should validate the updated information

And save the updated officer account details

Movie Management Module

Feature: Movie Management Module

Scenario: Administrator adds a new movie

User Story: MMUS001 – As an administrator, I want to add a new movie to the system so that it can be scheduled for shows in theatres.

System Behaviour:

Given the administrator is logged into the system

When the administrator selects the add movie option

And enters the required movie information

Then the system should save the new movie in the system

And make it available for scheduling

Scenario: Administrator enters movie details

User Story: MMUS002 – As an administrator, I want to upload movie details such as title, genre, language, **And** duration so that customers can see accurate movie information.

System Behaviour:

Given the administrator is adding a new movie

When the administrator enters movie details such as title, genre, language, duration, **And** release date

Then the system should store the movie details in the system

And make the information available for users

Scenario: Administrator updates movie details

User Story: MMUS003 – As an administrator, I want to update movie details so that the system always contains accurate information.

System Behaviour:

Given the administrator is logged into the system

When the administrator selects an existing movie

And updates the movie information

Then the system should save the updated movie details

Scenario: Validate updated movie information

User Story: MMUS004 – As a system, I want to validate updated movie details so that incorrect or incomplete information is not stored.

System Behaviour:

Given the administrator updates movie information

When the system validates the entered details

Then the system should check for missing or incorrect fields

And allow saving only **When** the information is valid

Scenario: Administrator deletes a movie

User Story: MMUS005 – As an administrator, I want to delete a movie from the system so that outdated or unavailable movies are removed.

System Behaviour:

Given the administrator is logged into the system

When the administrator selects a movie

And chooses the delete option

Then the system should remove the movie from the system

Scenario: Display movie deletion confirmation

User Story: MMUS006 – As an administrator, I want to receive confirmation after deleting a movie so that I know the action was successful.

System Behaviour:

Given the administrator deletes a movie

When the deletion process is completed

Then the system should display a deletion confirmation message

Scenario: View list of movies

User Story: MMUS007 – As a customer or officer or guest, I want to view the list of movies in the system so that I can see available movies.

System Behaviour:

Given the user accesses the movie section

When the user selects the view movies option

Then the system should display the list of available movies

And show basic details such as title, genre, **And** language

Scenario: View movie details

User Story: MMUS008 – As an administrator, I want to view detailed information about a selected movie so that I can verify its details.

System Behaviour:

Given the administrator views the movie list

When the administrator selects a specific movie

Then the system should display complete movie information

And show details such as title, genre, language, duration, **And** release date
